## 18560 battery pack design

What is a 18650 battery pack?

The 18650 battery pack is a modular energy storage system built from 18650 cylindrical lithium-ion cells, each measuring 18mm in diameter and 65mm in length. Originally developed for laptops, its standardized size and scalable design now fuel diverse industries, including renewable energy systems, electric vehicles (EVs), and portable electronics.

What is lithium-ion battery pack construction?

Lithium-ion battery pack construction requires systematic engineering methodology across electrical, mechanical, and safety disciplines. The design process demands careful evaluation of technical trade-offs at each stage, from initial cell selection through final certification compliance.

How can battery packaging design improve battery safety?

A robust and strategic battery packaging design should also address these issues, including thermal runaway, vibration isolation, and crash safety at the cell and pack level. Therefore, battery safety needs to be evaluated using a multi-disciplinary approach.
