# Best portable power station for tv Wholesaler

What is the best portable power station?

The Jackery Explorer 1500 Portable Power Station is our recommendation for the overall best portable power station. With a large battery capacity that can power a television for 21 hours and a variety of outlets and ports, it's suitable for home emergencies, camping, and job site use.

What is portable power station output?

Portable power station output is measured in watts, and there are two numbers to look at: Continuous output is the wattage the power station can deliver on an ongoing basis. Add up the power requirements of all your electronics that need to be plugged in at the same time, and choose a power station with a higher output than that.

How much power does a portable power station use?

Your portable power station should have a peak output that exceeds those requirements. Our overall best pick is designed to provide 1,800 watts of power to your devices on a continuous basis. If you need some extra power for a short time, or have an appliance that draws some extra power when it starts up, it can put out a maximum of 3,600 watts.

Why do you need a portable power station?

When you find yourself without access to electricity, the right portable power station can keep your most important electronics going. I love that portable power stations are silent (unlike home generators) and have all the right outlets and ports to power my electronics and appliances during a power outage or camping trip.

Size and Portability  
Battery Capacity  
Power Output For Electronics  
Charging Speed and Options  
Ports For Devices  
Portable power stations are all technically, well, portable, but some are decidedly more lightweight and compact than others. The size of the battery largely dictates size and portability. Portable power stations with large battery capacities will always be physically large, and there isn't much room for innovation there aside from adv...
