
Outdoor Energy Storage in 2025

Will energy storage growth continue through 2025?

With developers continuing to add new capacity, including 9.2 GW of new lithium-ion battery storage capacity in 2024 through November 2024 and comparable levels of growth expected through the fourth quarter of 2024, energy storage investments and M&A activity are expected to continue this trajectory through 2025.

What will storage be like in 2025?

Europe saw a pivotal moment when the grid-scale segment experienced a significant surge, surpassing the distributed segment for the first time. In Latin America, momentum was built as storage deployments increased by 42%. In 2025, emerging markets for storage will be on the rise.

What is the future of energy storage?

The future of energy storage is unfolding before our eyes, reshaping how we power our world. It's like watching the early days of smartphones--we know we're witnessing something revolutionary, but the full impact is still unfolding. For those wondering where this technology is heading, the trends are clear and exciting.

Will energy storage development continue to grow in the United States?

Amid ongoing conversations about grid reliability amid growing electricity demand driven in part by booming expansion of data centers and continuing interest in moving away from fossil fuels toward intermittent renewable resources, energy storage development will continue to grow across the United States.
