## **PV panels directly connected to inverter**

How do I connect a solar panel inverter?

To connect a solar panel inverter, make sure to connect the chokes at the inverter between the inverter and the solar panel array. Ensure the polarity is correct, as incorrect polarity can damage your inverter. Be cautious, as solar panel arrays output approximately 300 - 500 VDC.

How does a solar panel inverter work?

A solar panel inverter works by utilizing a high frequency switcher to regulate the voltage and convert it to AC. This allows the inverter to feed the AC power back into the mains. Some solar panels also use an optimizer on the back of the solar panel to optimize the usable energy from the individual or small group of panels.

What does a PV inverter do in a solar system?

In a solar system, a PV inverter converts DC power from the solar panels into AC power that can be used by appliances and the grid. However, the inverter can perform many tasks beyond that, such as maximum power point tracking (MPPT) to ensure the PV modules or arrays are operating at their maximum power. Thanks to advancements in power electronics, it is common to have inverters that implement MPPT mechanisms before inverting the voltage.
