## Solar plus energy storage for self-use

What are the benefits of a solar-plus-storage system?

Here are the benefits of a solar-plus-storage system: Around-the-clock power. If you use the utility billing mechanism known as time-of-use, and don't have a solar energy system, your electricity in the evening is likely more expensive because of the higher demand on the system.

How much does a solar-plus-storage system cost?

A solar-plus-storage system costs about \$25,000-\$35,000, depending on the size of the battery and other factors. It is easier and cheaper to install the panels and battery at the same time. But if you've already installed solar panels and want to add storage, you can: The battery will cost anywhere from \$12,000 to \$22,000.

Does a solar-plus-storage system work if you don't use electricity?

While most jurisdictions require homes to be connected to their local utility even if they don't use any electricity from the utility, a solar-plus-storage system takes you closer to "off the grid" status. Battery storage means you don't have to rely on your utility to deliver electricity to your home most days of the year.

Are solar-plus-storage systems a key pillar of energy transition?

As the global climate crisis intensifies and renewable energy technologies advance, Solar-Plus-Storage systems are emerging as a core pillar of energy transition. These systems are not just tools for households and businesses to reduce electricity costs--they are essential for grid stability, energy independence, and achieving net-zero carbon goals.
