# What capacitors to use for 12V inverter

Which type of capacitor is used in inverter?

Ceramic dielectric capacitors are the most commonly used inverter capacitors because of their robustness, high capacity and fast response time. Coated paper dielectric capacitors are also used in inverters, which have the advantages of low loss, high load capacity, power saving and energy saving.

Which inverter capacitor should I Choose?

The choice ultimately hinges on the inverter's design, intended use, and performance demands. Ceramic dielectric capacitors are the most commonly used inverter capacitors because of their robustness, high capacity and fast response time.

How to sizing capacitors for inverter bus link applications?

The first step in sizing capacitors for inverter bus link applications should be to understand how much bus link capacitance is required for a given inverter design. The biggest design limitation for electrolytic capacitors in inverter applications has been the amount of ripple current that the electrolytic capacitor can sustain.
