
What do solar panels need for home use

Why should you choose solar panels for your home?

Solar panels for home use increase energy independence and lower long-term electricity costs with the help of sunlight, additional hardware, and certified professionals. When considering solar panels for your home, finding the right system design and installer is essential to maximize your savings and investment in renewable power.

Are solar panels a good option for homeowners?

Fortunately for the solar-curious, many options exist for homeowners and even renters to get some or most of their electricity needs met with energy from the sun. The most common way to go solar for homeowners is the installation of panels on their roofs.

Should you install solar panels on your home?

The benefits of installing solar panels on your home include energy cost savings, increased home value, cleaner air, and energy independence. While solar panels have a reputation for being expensive, they're actually much cheaper than grid electricity. The greatest hurdle to going solar is the process itself.

How many solar panels do I Need?

The average solar system installed in the United States is about 7.2 kilowatts (kW) in size. That's between 15 and 19 solar panels. However, the actual system size you need depends on your home's roof characteristics, environmental factors, location, your energy usage, and the size of your home.
